Ralph sounds good. Sorry I could not get back to you sooner, but my mother passed away last week and I have been out until today. Let's talk. Mike.

Were winding down our surface removal. So far we've disposed of about 1000 tons of PCB soils, 50-60 drums, 5-10 electrical capacitors, suspected transformer pieces. We've got things looking good. We'll be done with our surface removal next week.

Now, here's the good news: We've uncovered MGP wastes in the ruins of the old gas plant **at the surface**. We've got lots of good, graphic photos. We're more squarely in the driver's seat than ever, now. We need to get these guys to make a decision about the AOC. If they're not interested then the UAO needs to go out ASAP- this MGP waste needs to be dealt with sooner rather than later. Let's schedule a meeting with them. June 23, 24, 25, and 29 are currently open for me. I want them to come to Chicago for it.
